

Business Intelligence Technology

More than ever, Federal government executives are faced with the challenge to deliver more efficient, effective, and transparent programs. To manage the allocation and utilization of funds, government agencies require in-depth insight into existing and historical patterns, as well as the ability to forecast future trends. Using key technology systems and state of the art tools to aid in planning efforts of an organization is critical to success.

Unfortunately, many Federal agencies do not have the information they need to manage the business. The data is there, but it is trapped in different silos and its accuracy cannot be trusted. The Center for Organizational Excellence, Inc. (COE) uses business intelligence technology to help Federal agencies achieve success by developing purpose-built software that enhances business processes, optimizes resources, and streamlines the or-

What is Business Intelligence Technology?

Business Intelligence technology (BI) are systems used by management that consist of a collection of software applications and underlying technology to gather, store, access, and analyze organizational data. This process helps organizations make better business decisions by exposing key metrics that drive the organization.

BI technology serves as a critical decision support system and facilitates use of data-driven decision making models. BI allows organizations to:

- Access enterprise information for efficient and intuitive reporting and analysis
- Enhance productivity and maintain a high degree of self-sufficiency
- Provide simple and secure information access to large numbers of executives, analysts, customers, and partners
- Respond faster and more efficiently to changing conditions and process information requests quickly, intelligently, and efficiently
- Enhance reporting systems by incorporating transactional forms, data maintenance and update capabilities
- Reveal organizational intelligence in profitability, customer support and statistical analysis

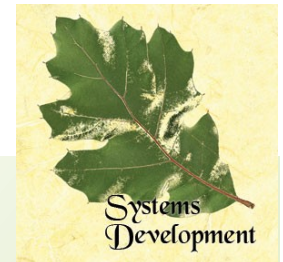

What are the Benefits?

- Ability to measure key performance indicators (KPIs) that typically are not easily measured
- Helps develop program plans with a complete understanding of the resources and costs involved
- Helps to continually monitor outcomes and realign resources to initiatives that deliver real results
- Provides information required for both the planning and execution phases of performance based budgeting
- Better and timelier access to customer activities, and supply chain issues

What can COE Offer?

Our methodology and development tools have made us very successful with our BI implementations in the Federal government. Our software development practice delivers an application engineered to incorporate any aspect or feature required.

COE provides tailored software solutions that are cost effective, efficient and agile. We offer the best in information management solutions through cutting edge software design and development. Our solutions cover both business processes and technologies for all business process reengineering (BPR) and BI needs.
