

# Enterprise Systems Development

The two most significant and costly elements of an organizational change effort are new or transformed technology and helping organizations develop technology systems customized to their organizational needs. The Center for Organizational Excellence, Inc. (COE) has a wide range of expertise in driving process oriented software development and support using a traditional waterfall SDLC approach to Agile/Scrum methodology to an iterative SDLC approach to meet the diverse needs of our clients' organizations while addressing the unique nature of each engagement to deliver project results. We can support you with the development of new and transformed technology systems as well as provide project management (PM) and project management office (PMO) support.

## What is Enterprise Systems Development?

Design and development of information technology (IT) systems with complex requirements such as:

- Enterprise systems
- Measured results
- Statistical Data Mart (SDM)
- Architecture development and management
- Large data warehouse
- Service Oriented Architecture (SOA)
- User Interface (UI) expertise to meet user needs
- Reporting systems and dashboards
- Requirements analysis and business RUIs development

Project Management in these major areas:

- Systems design and development requirements
- Budgeting
- Schedules
- Resource controls
- Change control
- Quality assurance
- Status management
- Earned value management (EVM)
- Independent verification and validation (IV&V)

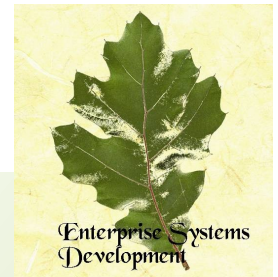

## What are the Benefits?

With COE's enterprise systems development services, you can:

- Create technology solutions with COE's core team of program managers, architects, developers, database administrators, business analysts, with specialty skills
- Successfully develop and deliver your IT system on time, within budget, and meeting all of your quality needs
- Realize the value of project management without incurring the cost
- Focus on critical business and organizational factors

## What can COE Offer?

- Years of experience supporting major systems development projects
- Seasoned professionals that will design and develop customized IT systems and help you define standards, establish data warehouses, analytics and associated tools
- Minimizing risks involved in systems development and implementation
- Results oriented management of developing a new or transformed IT system
